Hiring Team
Moniepoint Group

Dear Hiring Team,

Field Verification sits at the intersection of identity, field operations, workflow design and platform engineering. My career has covered each part of that problem: national biometric programmes, mobile field-data systems, operational platforms, APIs and the engineering organisations needed to run them.

At Genkey, I led product development for the Biometric Voter Register Adjudication Client. I built process models and interfaces, developed ABIS software for Ghana's Electoral Commission, demonstrated the product to stakeholders and trained registration-kit trainers. I also supported the bid and AFIS client work for Kenya's IEBC biometric voter-registration programme. That experience taught me that identity systems succeed only when software, evidence, field processes and institutional users work as one system.

I later built the front end for MFieldwork, a platform used by NGOs and development organisations to capture data on mobile devices and move it to a server for analysis and visualisation. At Living Goods, I led technology delivery for direct operations and technical-assistance programmes. I grew a distributed organisation spanning engineering, data science, QA, design, product and project management, then established the delivery lifecycle that connected those disciplines.

More recently, I led Product, Engineering and IT at Peach. I designed and delivered a web application and internal tools for vehicle intake and assessment. At Bridge, I set the architecture for API, mobile and web products while building the team and management structure around them. These roles required the same move Moniepoint needs: turn important operational work into deliberate product and platform development.

For the past two years, I have also made language models part of how I research, define and deliver products. I use them where interpretation or generation improves the workflow, and conventional software where rules, reliability and cost control matter.

I bring 20 years in software, 10+ years of production Java, Kotlin experience and 10+ years hiring and managing Engineering Managers. I would welcome a discussion about giving Field Verification clear technical direction and preparing it for Kenya and other markets.

Sincerely,
Nii Amon Dsane
