intake and assessment app, unified system of record tracking listings, yard management and other internal tools

Bridge Technologies Limited // Nairobi, Kenya

CTO & VP of Engineering

July 2022 - Jan 2023

- In partnership with the company's founders, identify opportunities and risks for delivering the company's services as a API-driven, consumer-first business, including identification of competitive services, opportunities for innovation, and assessment of marketplace obstacles and technical hurdles to business success
- Lead strategic planning to achieve business goals by identifying and prioritizing development initiatives and setting timetables for the evaluation, development, and deployment of all API, mobile and web-based services
- Evaluate and identify appropriate technology platforms (including mobile and web application frameworks and the deployment stack) for delivering the company's services
- Participate as a member of the senior management team in establishing governance processes of direction and control to ensure that objectives are achieved, risks are managed appropriately and the organization's resources are used responsibly, particularly in the areas of software development, hosting infrastructure, and telecommunications
- Collaborate with the appropriate departments to assess and recommend technologies that support company organizational needs.
- Direct development and execution of an enterprise-wide information security plan that protects the confidentiality, integrity, and availability of the company's data and servers

Initiatives and outcomes

- Delivered a partner integration initiative for a network-wide cross-border remittance product for MTN Group in collaboration with MFS Africa. This product enables any MTN user to send money to MTN users in other op-cos. The product would be launched to 70m MTN subscribers in Nigeria.
- Delivered an integration with KCB to enable outbound remittances to Nigeria
- Evaluated existing Brij products, identified engineering gaps, recruited a team and at 80% status completion to releasing two consumer apps (Brij Send, Brij Mobile), a merchant app (Brij Merchant Portal) and a set of APIs (payments API, cross-border remittance API, wallets API, currency swaps API) within 3 months
- Created and documented an architecture using microservices and open source middleware and APIs to power the product, services and market strategy. Architecture is being implemented across Brij product and services catalogue including direct merchant payments, cross-border remittances, currency swaps and merchant services.
- Identified key human resource gaps in the engineering organisation, created an org structure and recruited the right people into the roles
- Created a product roadmap outlining product and service evolution over time and capability for engineering team usage as well as enabling ExCo to track progress and align resources for initiatives
